ABOUT ME

Full Stack Developer focused on React, Next.js and Typescript on the frontend, and Node.js, NestJS and Java on the backend. I have shipped to production e-invoicing applications integrated with ARCA and Mercado Pago, a microservices backend containerized with Docker and CI/CD, and corporate websites scoring 100 on Lighthouse performance. Two years in infrastructure and IT support before that mean I bring judgement on networking, deployments and process automation, not just on writing code. Spanish native and English C1.

EXPERIENCE

Freelance Full Stack Developer

Argentina

Client projects

2024-2025

- Build e-invoicing applications integrated with ARCA (Argentina's tax authority, formerly AFIP) and Mercado Pago, covering invoice issuing, payments and reconciliation.
- Implement process automations with n8n, Make and Zapier, integrating APIs and external services to remove repetitive administrative work.
- Design and build responsive landing pages and corporate websites. Shipped jlgroup.com.ar to production, scoring 100 on Lighthouse performance and cutting load time by 35% (lazy loading and code splitting).

Fullstack developer

Argentina

Matchar

2026-Present

- Designed and developed the company's landing page end to end, from wireframes and visual identity in Figma to production deployment, using React and Tailwind CSS.
- Implemented SEO best practices (semantic HTML, meta tags, structured data, image optimization), improving organic visibility and search ranking.
- Consumed the backend API to render dynamic content across the site, handling loading and error states, client-side validation and form submissions.

SKILLS

Skills: Java, Spring Boot, SQL, JavaScript, React, AWS, Typescript, Next.js, HTML5, CSS3, Node.js, NestJS, PostgreSQL, REST APIs, MongoDB, MySQL, Docker, Jest, Testing, n8n.

PROJECTS

Microservices system — NestJS + Angular

2025

Distributed backend split into 3 independent services (product, user and billing) built with NestJS on Express.js and communicating over REST Apis, with containerized deployment in Docker and CI/CD on GitHub Actions. Component-based Angular frontend consuming the Apis, with Jest coverage across the backend. Technologies: NestJS, Typescript, Angular, PostgreSQL, MongoDB, MySQL, Docker, GitHub Actions, Jest

EDUCATION

Instituto Técnico Superior de Cipolletti, Argentina

2023-2025

Higher Technical Degree in Full Stack Software Development

AWS Academy certifications, Argentina

2024-2025

Cloud Architecting (2025) · Machine Learning Foundations (2025) · Introduction to Cloud (2024)
